

### **Amendments to the Claims:**

The listing of claims will replace all prior versions, and listings, of claims in the application:

### **Listing of Claims:**

1. (Original) A method of enhancing signals in a mobile telecommunications system, the system comprising a base station and first and second receivers within a reception zone of the base station, the method including:

- a) receiving a plurality of first signals at the first receiver, the first receiver having a good quality communications link with the base station;
- b) receiving a plurality of second signals at the second receiver;
- c) correlating the received signals from both receivers to provide an estimated correlation therefor;
- d) selecting areas from within the estimated correlation;
- e) creating a replica of unwanted signals using said selection and said plurality of first signals; and
- f) enhancing said plurality of second signals by eliminating said replica therefrom.

2. (Original) A method according to claim 1, wherein the estimated correlation comprises a correlation of propagation delay and frequency shift for the received signals.

3. (Currently Amended) A method according to claim ~~1 or~~ 2, wherein step f) includes correlating said enhanced plurality of second signals with said plurality of first signals to produce an enhanced correlation.

4. (Original) A method according to claim 3, wherein the enhanced correlation comprises a correlation of propagation delay and frequency shift for the enhanced plurality of second signals and the plurality of first signals.

5. (New) A method according to claim 1, wherein step f) includes correlating said enhanced plurality of second signals with said plurality of first signals to produce an enhanced correlation.

6. (New) A method according to claim 5, wherein the enhanced correlation comprises a correlation of propagation delay and frequency shift for the enhanced plurality of second signals and the plurality of first signals.
